2024-2025 Assessment Narrative on Findings

Biology (BA)

Mission and Introduction

Introduction

1. Provide an overview of the program and the context of where it's housed within the institution (what department, etc.).

Narrative:

The Biology Program is housed the School of Science and Health.

The Biology program prides itself on being hands-on, with immersive and extensive laboratory classes in addition to regular lecture-based courses.

This is our mission: A program designed to both educate students and prepare them for immediate careers in the biological sciences (especially those in ecology or conservation), or for acceptance into graduate programs.

Program Mission Statement

1. What changes has the program made to the mission statement over the course of this cycle? Why were these changes made? Are any revisions planned?

Narrative:

This is our mission: A program designed to both educate students and prepare them for immediate careers in the biological sciences (especially those in ecology or conservation), or for acceptance into graduate programs.

This continues to be our mission

Alignment to Institution Mission

1. How does the mission of the program align with the mission of the institution?

Narrative:

The Biology Program's mission directly aligns with William Woods University's larger mission. We have a commitment to student-centered learning, and focus on foundational understanding, contributing to students' intellectual growth.

The University's focus on career preparation aligns with our program's aims to prepare students to take the next step in professional careers.

While not mentioned directly the program provides opportunities for working together with diverse others, experimental design, public speaking, and other expressions of creativity and intellectual inquiry that can foster inclusion and excellence.

Student Learning Outcomes Assessment and Curriculum

Program Student Learning Outcomes

1. Describe how these outcomes pertain to the program's mission. Have any changes been made to these outcomes over the course of this cycle? Why or why not?
2. Describe the extent to which students in the program have met these outcomes.

Narrative:

Evidence:

- [Biology \(BA\)_2024-2025 Curriculum and Assessment Findings_2024-2025](#)
- [Biology BA annual Assessment 2023-2024](#)

Curriculum Map

1. Describe the course pathway students take to achieve this program degree. Highlighting any key or core courses, have any changes been made to this pathway or degree requirements over the course of this cycle? Why or why not?

Narrative:

No substantive changes have been made. Will expand next year as I'm just trying to get this submitted and this wasn't my section.

Measures and Results

1. Discuss the measures you've selected or developed to measure this outcome. Why were these measures chosen? Were any measures or assessment instruments changed over the course of this cycle? Why or why not? Will different measures be chosen the next time this outcome is assessed?
2. Summarize and discuss the results of the program's measures over the course of this cycle. Have the results demonstrated improvement or mastery of this outcome? Why or why not?

Narrative:

Evidence:

- [Biology \(BA\)_2024-2025 Curriculum and Assessment Findings_2024-2025](#)

Participation in Assessment

1. How do program faculty participate in assessment? What is the process? Have any changes been made to encourage participation over the course of this cycle?

Narrative:

All faculty participate in assessment. We all have assessment tied to at least one of our courses. We take turns picking our speakers and designing the questions and assessments for SPR day for our Sophomores and Juniors.

Action Items and Use of Results

1. Summarize or highlight action items taken as a result of program's assessment results. How have the results driven improvement over the course of this cycle?

Narrative:

Evidence:

- [Biology \(BA\)_2024-2025 Curriculum and Assessment Findings_2024-2025](#)

Gen Ed

1. What courses in your program are tied to general education requirements at the institution? How many students from outside the department are taking courses in the program to fulfill gen ed requirements?

Graduate Programs please note NA in this section as it does not apply to your program.

Narrative:

BIO 114/115 is a general education course, and it is pretty much only Biology, Exercise science, and secondary education majors. BIO 209 is also a general education course offered every Fall on-ground and every term online. This is only taken by non-majors. BIO 108 is also a gen Ed, offered only on-ground in the Spring, and taken by Psychology majors and other interested non-majors.

NSSE Focused Activities

In the Spring of 2024, the faculty voted on the following NSSE objectives for focus.

2B - Connected your learning to societal problems or issues.

2F - Learned something that changed the way you understand an issue or concept.

9A - Identified Key information from reading assignments.

6A - Reached conclusions based on your own analysis of numerical information (numbers, graphs statistics, ...)

How has your program incorporated these learning objectives into the program curriculum?

Graduate Programs please note NA in this section as it does not apply to your program.

Narrative:

We will write this better next year. This was not my section, and I am just trying to get this submitted at this point.

Concentrations

Concentration Information

Please list the concentrations that relate to your program. If you do not have any Concentrations, please note N/A in the text box.

Narrative:

N/A

Faculty Qualifications, Activities and Scholarship

Scholarship and Research

1. Summarize and highlight key scholarship and research activities conducted by faculty over the course of the review cycle.

Narrative:

This year the bulk of the scholarship and research activities centered on supporting students on their senior and honors research projects. We also each included a self-designed research project into many of our labs.

Dr. Greenland-White had a formal research project focusing on the impact of altitude on the rates of Covid-19 infection progressing into Long-Covid. She was able to do this project with the help of Emma Griggs and Anna Hirschowitz. They presented that work at the William Woods' 2025 Research, Scholarship, and Creativity Symposium, and at the 2025 Annual Meeting of the Missouri Academy of Science.

The abstract from that presentation is included as evidence in an attachment.

Evidence:

- [Abstract MAS](#)

Faculty Awards and Honors

1. Discuss and highlight awards and honors received by faculty over the course of the cycle.

Narrative:

Dr. Greenland-White was awarded the William Woods University Cox Distinguished Professor 2024/2025 grant which allowed her to pursue a research project with undergraduate students.

Dr. Greenland-White has also honored to receive the Louis D. Beaumont Distinguished Professor Award for Excellence in Teaching-2025

Evidence:

- [Greenland-White prof of the year](#)

Teaching Support and Monitoring Teaching Quality

1. How are faculty being supported to ensure high quality teaching and learning?

Narrative:

In addition to the provided professional development opportunities provided by the school, and the support that comes from school meanings this year, Dr. Sean Baldrige, as Dean of the school, has observed each of us teach and has made himself available for feedback from that.

Evidence:

- [Dr Baldrige classroom visit schedule from Teams](#)

Program Data: Student Experience

Enrollment and Recruitment

1. What are the trends with enrollment in this program over the course of the review cycle? How does this compare to institutional trends or similar programs on campus?

2. Describe recruitment efforts or goals such as increased enrollment or diversity. Have these initiatives been successful?

Narrative:

Our enrollment has held pretty steady in BA Biology. It has stayed between 15 and 18. Though we had a little dip when the entire University did, it wasn't as dramatic in this program. We do not put much effort into recruitment other than the usual. Discovery days, Prospective students, and we are always happy to work with admissions and marketing whenever they are interested.

Evidence:

- [Science and Health Department Report Full](#)

Retention

1. Has student retention remained in an acceptable range over the course of the review cycle?
2. Discuss strategies or actions that the program is doing to impact student retention within the program?

Narrative:

I believe retention is within an acceptable range. When we lose students, it is often freshman who find Biology too hard or athletes who aren't getting along with their coaches. I think our strategy of being very present, caring, and approachable faculty make Biology students feel at home and welcome.

Evidence:

- [Science and Health Department Report Full](#)

Curriculum/Course Retention and Success

1. Describe enrollment trends in the courses within the program.
2. Reflect on the success of the students within the courses over the course of the cycle. Highlight some completion or DFW rates in the core courses. Were these in line with expectations?
3. Assess student performance and success in online vs. on-campus courses.

Narrative:

Some of our courses are offered every other year and so that can lead to some of our annual courses having some spikes and dips in enrollment, but otherwise course enrollment trend is constant. Our main wildcard is Exercise Science students and which Biology courses they require.

I don't know what DFW is, but our students generally successfully complete our courses. Not many students fail in major courses, they are generally self-selecting out Freshman year or make it. We are challenging but approachable. Again, when students leave our department or University it really never seems to be due to Biology Faculty or curriculum.

None of our in major courses are offered online.

Completion

1. How many students are graduating from the program? Have the completion rates been in line with expectations?
2. Describe findings resulting from exit surveys or program alumni surveys that were conducted over the course of the cycle.

Narrative:

The BA is small, but we have graduated but our within department graduation rate has been 50%, 75%, 62.5%, and 37.5%. The lowest is also the oldest and least relevant.

Evidence:

- [Science and Health Department Report Full](#)

Course Evaluation Data

1. What were some positive and negative feedback received from students who completed the courses? Highlight any trends or insights that came from course evaluations over the course of the cycle.

Narrative:

In general, Biology course evaluations were at or exceeded University averages. Our most glaring weakness was “well organized”. Our biggest strengths are demonstrates enthusiasm for the subject, presents thought-provoking questions and problems, and sets high expectations for learning.

I will also note that all Biology faculty have won teacher of the year before: an incredibly high honor chosen by our students.

Evidence:

- [BIO_Fall_2024](#)
- [BIO_Spring_2025](#)

Student Advising

1. What advising mechanism is in place for the student?

Narrative:

All BA majors are advised by full-time Biology faculty. Every fall the semester, the Biology Department holds a 4-year planning session for our Biology majors with the focus to help incoming majors make a 4-year degree plan. However, we often have second- and third-year students modifying their plans as well. This event is extremely helpful as we know all our Biology majors have received the same information about our degree plans and course rotations and any other degree-associated updates. This occurs prior to the students having their fall Advising meeting with their advisors about registering for their spring courses.

Student Awards and Achievements

1. Highlight the accomplishments and external honors received by students in the program over the course of this cycle.

Narrative:

Isabelle Boschert won the Biology Distinguished Scholar award.

Program Analysis

SWOT Analysis

1. Strengths, Weaknesses, Opportunities, and Threats.

Narrative:

Strengths:

- **Dedicated and Available Faculty:** Faculty are highly accessible to students, fostering a strong sense of community and providing invaluable support beyond academics. Student feedback is extremely positive.
- **Clear Course Rotation:** The program effectively follows its course rotation, minimizing the need for independent study courses, which speaks to good organizational planning despite resource constraints.
- **Thoughtful Curriculum Changes:** Curriculum adjustments are well-reasoned, data-informed, and aim for minimal disruption while enhancing the flexibility and clarity of the B.A. pathway.
- **Filling a Niche:** The B.A. program, with its specialization in ecology and conservation, caters to a specific biological interest not fully addressed by the B.S. program, indicating a potential for unique appeal.

Weaknesses:

- **Significant Infrastructure Deficiencies:** The most critical weakness is the inadequate building, lab spaces (non-ADA compliant, unsafe), and outdated equipment, severely impacting student learning and the program's growth potential.
- **Technology Deficiencies:** Lack of current technology in classrooms and labs hinders effective teaching and prevents students from gaining essential experience with modern biological instrumentation.
- **Faculty are stretched thin:** The current staffing model relies heavily on faculty working voluntary overload, creating a precarious situation and potentially hindering program development.

Opportunities:

- **Expand Plant Science Offerings:** Capitalizing on the job market demand for plant specialists by adding a faculty member with this expertise could significantly enhance the B.A. program's appeal and provide unique opportunities for students.
- **Improve Post-Graduation Data Collection:** Implementing a more robust system for tracking graduate outcomes would provide valuable data for program evaluation and recruitment.
- **Collaborate with Other Departments:** Exploring potential collaborations, such as with the Education department for BIO 418, could create new opportunities and potentially share resources.

Threats:

- **Inability to Compete:** Without significant infrastructure and technology upgrades, graduates may be less competitive for jobs and further education compared to students from better-equipped institutions.
- **Loss of Key Faculty:** The precarious staffing situation, with everyone on overload, makes the program vulnerable to disruptions if a faculty member leaves or becomes unable to teach. With Dr. Keller leaving this year we are vulnerable if we do not fill her position.
- **Lack of Administrative Support:** If the university does not prioritize investment in the sciences, particularly the Biology program, the identified weaknesses will persist, and the program's potential will remain unrealized.

Evidence:

- [External Review Report - BA - Busalacki](#)

Industry and Program Trends

Senior Exit Surveys

1. What were some positive and negative feedback received from students as they complete their degrees? Highlight any trends or insights that came from exit surveys over the course of the cycle.

Narrative:

Will start next year.

Recommendations from Previous Annual Assessment Reports

1. Summarize Action Items, goals from the program that were listed in the previous Annual Assessment report, describe how/if those recommendations were applied this year.

Narrative:

There were a few action items to change benchmarks, which we did not do. We should address this in Fall 2025.
